

Drive Down Fuel Costs Drive Down Emissions

Example Savings Available from EconoSpeed Connect

100 vehicle fleet
Averaging 60,000 miles per year
20 miles per gallon
5% Saving from EconoSpeed Connect =
£80,454 and 182 tonnes CO₂ Saved

The reduction of CO₂ emissions is an ever-growing concern for the business world. With approximately 25% of the UK's carbon emissions generated by the traffic on our roads, commercial vehicle fleets have been placed front and centre in the efforts to drive down CO₂ emissions. In addition, government legislation has put an increased burden on fleet operators to seek out new and effective ways of reducing their carbon footprint.

EconoSpeed Connect is a fuel saving system designed for commercial vehicle fleets that cuts CO₂ emissions. It reduces fuel consumption and emissions by an average of 4-6%, with savings up to 10%. It does this automatically and works from the moment your drivers pull away.

The majority of fuel economy systems focus on modifying driver behaviour through training – with limited results. With high turnover of staff or simply reverting back to old habits, this training often has to be repeated time and time again. Throw in complicated telematics and data analysis and these systems effectiveness is drastically limited.

EconoSpeed Connect is a fitted system that works automatically, allowing the driver to concentrate on the road. No on-going driver training is needed. The fitting process is simple and quick, taking under an hour, and can be easily incorporated into the vehicle's routine service schedule, helping to minimise downtime.

Zeta Automotive have the capability to manage, plan and roll-out large fleet installations in all regions of the UK and across Europe.

How much will your fleet save?
